

● TRUSTLABEL

Your reviews policy, published in 90 seconds.

Every online seller in Korea has to disclose how they handle customer reviews. Most have no idea, and the deadline is fixed.

Built today. Live now at trustlabel.store.

35

DAYS UNTIL ENFORCEMENT

₩10,000,000

MAXIMUM PENALTY

Four things every seller must publish.

전자상거래법 제21조의4

시행 2026-10-22 · 공정거래위원회

01 Who may write a review

사용후기 작성 권한이 있는 자의 범위

02 How long it stays up

게시기간

03 How reviews are ranked

등급평가 기준 및 효과 — vague terms like “usefulness” are explicitly insufficient

04 When they are removed, and how to object

삭제 기준과 이의제기 절차 — hiding a review counts as deleting it

THE PRODUCT

Five questions in, a legal disclosure out.

No lawyer. No developer. The seller answers in their own language — the disclosure is always generated in Korean, because that is who has to be able to read it.

사용후기 수집·처리 정보공개

1. 사용후기 작성 권한: 실제 구매(결제)가 확인된 고객에게 작성 권한이 있습니다.
2. 게시기간: 등록된 후기는 삭제 요청 전까지 영구히 게시됩니다.
3. 평가·순위 기준: 알고리즘이 다음 기준에 따라 후기의 노출 순서를 정합니다 — 후기의 구체성 및 분량, 사진·영상 첨부 여부.
4. 삭제 기준 및 이의제기: 운영정책을 위반한 경우 해당 후기를 삭제하거나 비공개 처리할 수 있으며, 작성자는 고객센터를 통해 이의를 제기할 수 있습니다.

해피몰 · TrustLabel로 생성 · 법률 자문이 아닙니다

THEN ONE LINE

Paste this anywhere. It appears.

```
<script src="https://trustlabel.store/api/embed/c9dykuvf" async></script>
```

Served cross-origin with `stale-while-revalidate`, so a CDN keeps showing the last good copy even if we go down. **Every failure path returns valid JavaScript** — a 404 that returned HTML would throw a syntax error inside someone else's page. Both paths are checked with a parser, not by eye.

That URL goes into a stranger's production HTML and stays there for years. So editing a disclosure never reissues its slug, and the text is frozen at save — a later change to our generator cannot rewrite something a seller already published.

AND THEN WE CHECK

Is it actually showing?

Paste your storefront URL. We fetch the page and look for it. Three answers, never two:

01 **Found**

The disclosure is live on your page.

02 **Not found**

We read your page and it is not there.

03 **Could not check**

We could not reach the page. That is our problem, not yours — and collapsing it into “not found” would be a false accusation.

Private addresses are refused rather than fetched. An endpoint that will retrieve any URL you hand it is a proxy into our own network, not a feature.

BUILT IN ONE DAY

What we kept, and what we cut.

SHIPPED

- + Bilingual wizard with live preview
- + Korean disclosure generator
- + Public page, QR, link preview
- + One-line embed for any site
- + Install checker
- + Magic-link accounts, per-row RLS
- + Public landing page and waitlist

DELIBERATELY NOT BUILT

- Payments — pricing is unvalidated
- Hash-chained audit trail
- Law-firm certified wording
- Scheduled monitoring and alerts
- Teams and roles

The cut list is not a backlog. Each one needs something we do not have yet — a validated price, a lawyer, a customer.

UNDER THE HOOD

Three questions, three real answers.

01 **“A seller types `</script>` into a field. What happens?”**

Nothing. The embed serialises its data with `JSON.stringify` and builds the DOM with `textContent` — never `innerHTML`. We pushed that exact payload through and executed it: it renders as visible text.

02 **“Your checker fetches any URL. Is that an open proxy?”**

No. Hostnames are screened, then whatever they resolve to is screened again, and both run on every redirect hop. Thirty-four refusal cases, including the cloud metadata address at `169.254.169.254`.

03 **“Where do you keep the service key?”**

We don't have one. The row-level policies are written so the public page and the embed work with the anonymous key alone. A secret we never created cannot leak on stage.

THE HONEST PART

This generates a draft, not legal advice.

The wording is written against the regulator's published summary, and no lawyer has reviewed it. That line ships on the public page and in the footer — not buried, not in grey 10px.

A compliance product that overstates what it guarantees is the one thing worse than no compliance product. The next real step is not a feature. It is template certification by a Korean e-commerce firm, marketed as 문구 검수.

CLOSE

Ninety seconds, no lawyer, no developer.

A legal obligation, turned into
something a shop is willing to display.
